ZANHO Cutting Tools

APKT-76

— Milling Inserts —

Feature

ZANHO APKT1604PDR-76 is a high-performance **positive rake** milling insert engineered for **90° shoulder milling**. The specialized **-76 chipbreaker** provides a perfect balance between cutting

edge strength and reduced load, ensuring stable chip formation and evacuation. With its large positive rake design, it effectively suppresses vibrations and excels in **interrupted cutting** conditions due to its reinforced, honed edges.

Descriptions

Core Performance Features

- **True 90° Milling:** Optimized for high-precision shoulder milling, completing side walls and bottom surfaces in a single, efficient pass.
- **Balanced -76 Geometry:** The unique chipbreaker profile maintains structural edge strength while significantly lowering cutting loads for smoother machining.
- **Vibration Suppression:** Large positive rake angle reduces cutting resistance, suppressing chattering and ensuring superior surface finish.
- **Stable Chip Control:** Refined chipbreaker contours constrain chip curling, achieving consistent breaking and rapid evacuation.
- **Impact Durability:** Honed cutting edges enhance resistance to chipping, making it highly reliable for demanding interrupted cutting tasks.

Specifications (mm)

Model	Eff. Length	Thickness (S)	Hole (d)	Radius (r)
