SNMX-F57

ZANHO Cutting Tools

Feature

ZANHO **SNMX 1205-F57** is a robust **double-sided 8-edge** milling insert engineered for heavy-duty roughing to semi-finishing. Featuring a **reinforced negative land** and deep recessed chip cavities,

it excels in machining workpieces with hard skin and scale. It delivers stable chip curling and maximum tool economy for high-volume face milling in Steel and Cast Iron.

Descriptions

Key Technical Advantages

- **Exceptional 8-Edge Economy:** Double-sided negative square structure provides eight highly effective cutting corners, significantly lowering the tool cost-per-edge for industrial users.
- **Reinforced Negative Land:** The cutting edge is treated with a robust negative land geometry to provide superior resistance to chipping and fracture, ideal for machining through casting scale and hard workpieces.
- **Chip-Guiding Ridge Structure:** Features integrated limit ridges that guide chip curling and flow, preventing chips from scratching the finished surface and maintaining high workpiece integrity.
- **Large-Capacity Chip Cavity:** The deep recessed pocket design provides ample space for rapid chip evacuation, drastically reducing the risk of chip clogging during medium-to-high feed passes.
- **Versatile Machining Stability:** Optimized for stable performance in both continuous and light-interrupted roughing to semi-finishing face milling tasks.
